

Set Up Environment Instructions

1. Git

Note: it's important to setup git on your computer to be easy to track the changes and sync with github. it allows you to git the latest update from github and put your changes in github.

2. Java

Note: important for the project and IDE

3. XAMPP

Note: installation of PHP and MySQL DB

4. NetBeans IDE

Note:

- I will work with NetBeans IDE.
- it supports Java, HTML, CSS, PHP, Java Script.
- you can use your own editor, but it's your responsibility to integrate it with Git and configure it with web server and DB.

5. Tomcat Server

6. Oracle DB

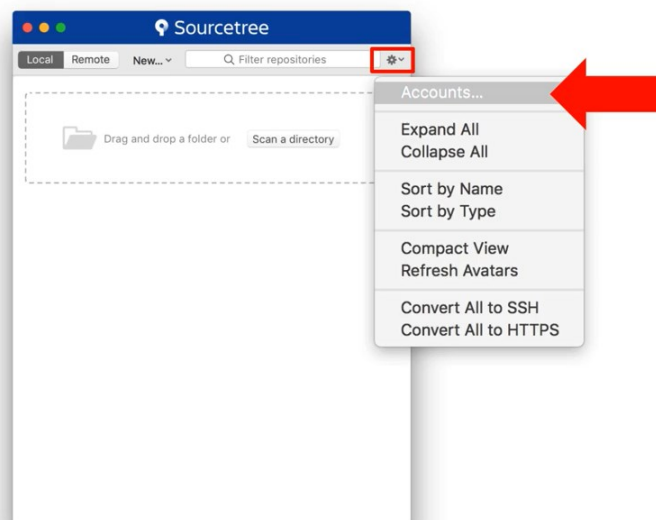

Git Installation (Command Line):

1. Download Git Source file from:
<https://git-scm.com/>
2. Open Git bash
3. Configure your user name, email address and default Git editor.
 - a. `git config --global user.name "Your Name".`
 - b. `git config --global user.email "your@email".`
 - c. `git config --global core.editor "'C:/Program Files/Notepad++/notepad++.exe' -multiInst -notabbar -nosession -noPlugin".`

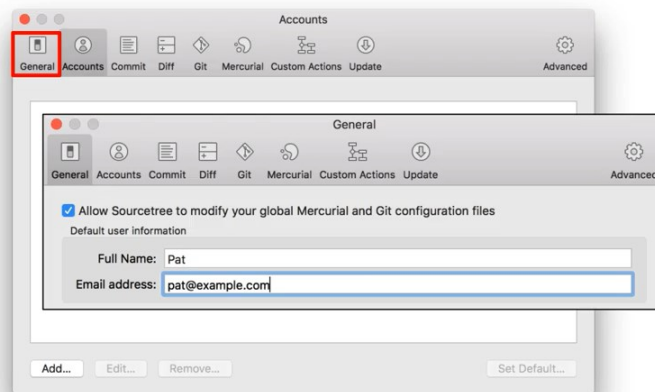

Git Installation (GUI):

1. Download SourceTree Source file from:
<https://www.sourcetreeapp.com/>

CONFIGURING SOURCETREE

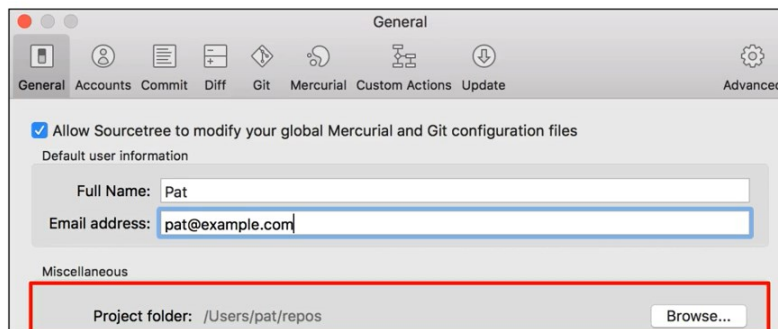

CONFIGURING SOURCETREE- USER INFORMATION

7

CONFIGURING SOURCETREE- LOCAL REPOSITORY LOCATION

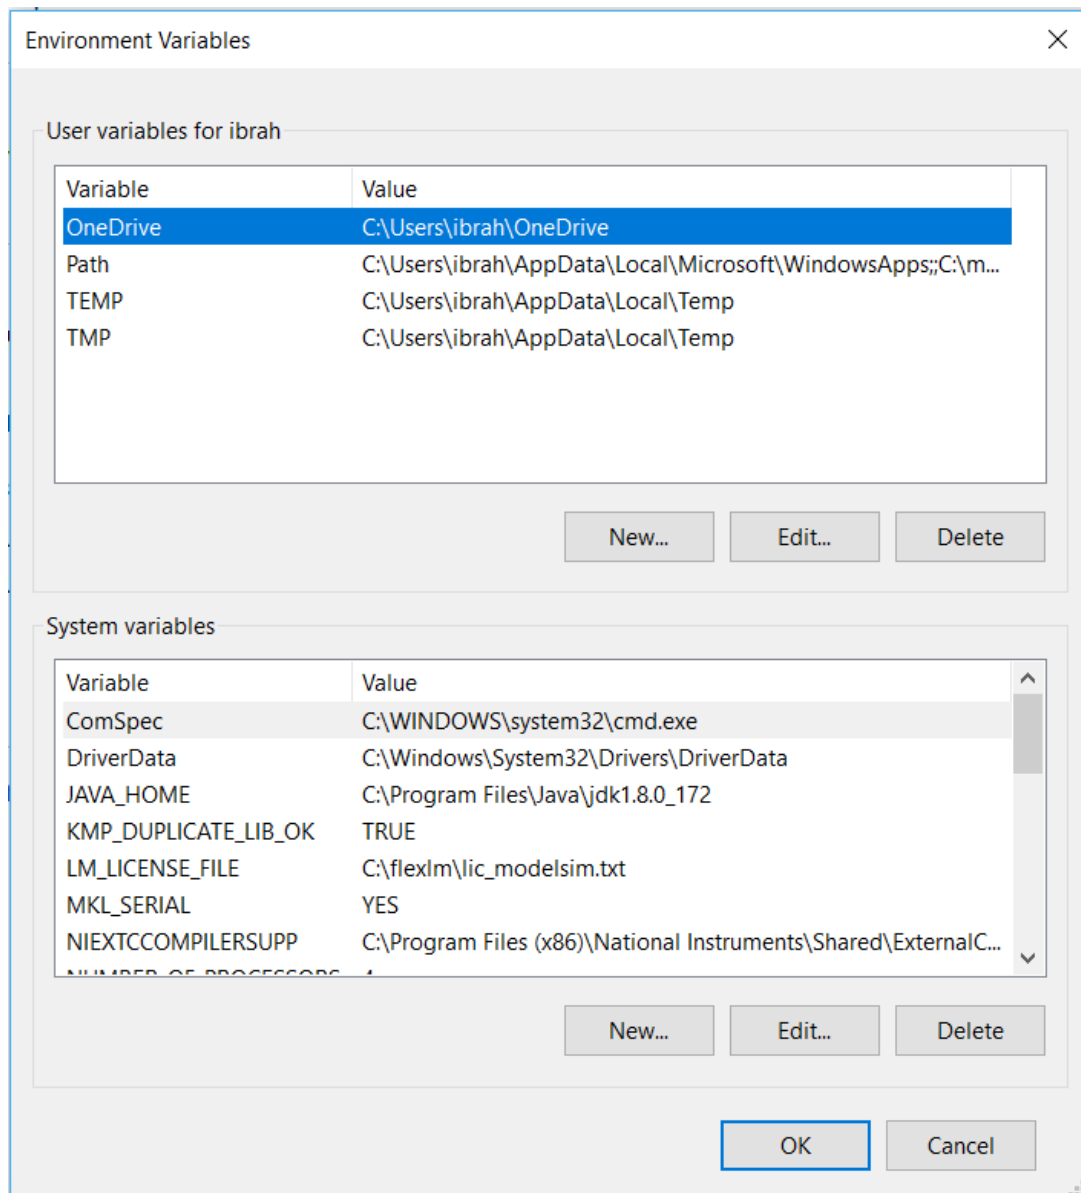

Suggestion: create a `/repos` folder in your user folder

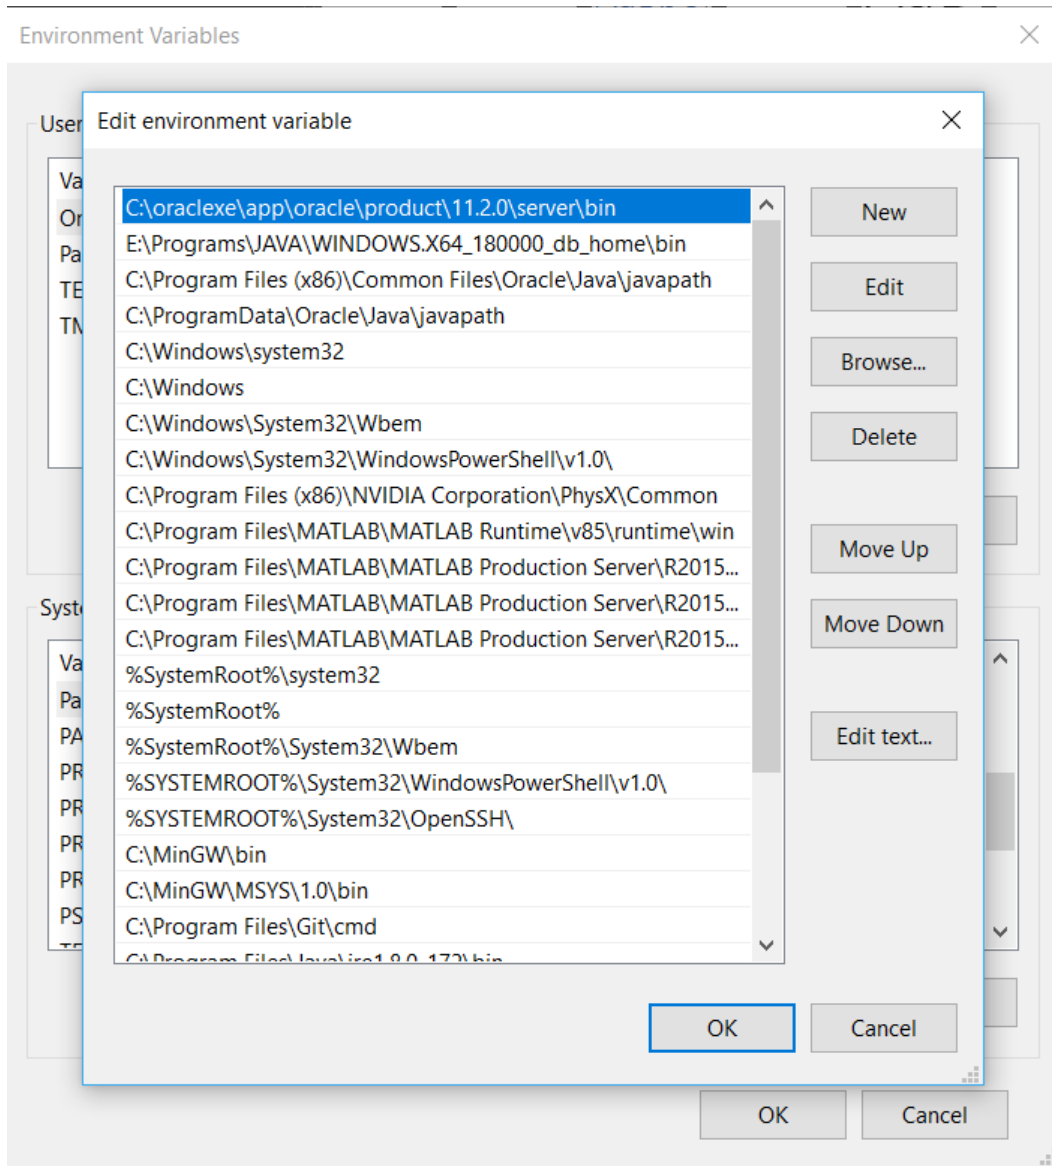

9
